

Planning for Success

Where you are now

You have gained foundational technical proficiency in Python and GitHub while establishing documentation and time management habits through CareerBridge (courses 1 & 2 completed). You have transitioned from past hesitation around speaking up to a proactive mindset, actively engaging with your supervisor and recognizing the workplace as a supportive space for questions and growth.

How your internship has been going so far

Internship progress is strong as you successfully translate theory into real-world development. Working with Ashinity Synergy, you maintain daily communication with your lead developer and navigate cross-cultural collaboration with ease, proactively asking for clarification when audio or requirements are unclear. You prioritize deadlines and have embraced hands-on problem-solving.

Where to focus for the remaining weeks

For the remaining weeks, focus on completing CareerBridge Course 3 and advancing hands-on Python and GitHub deliverables. Practice active communication by asking open-ended questions to clarify project scope and using the sandwich model for constructive feedback. Continue logging daily achievements and meeting minutes to build a compelling portfolio for job interviews.

Your Next Steps!

Practice Open-Ended Clarifying Questions

When receiving tasks or feedback from your supervisor, ask open questions (e.g., starting with 'How' or 'What') rather than yes/no questions to verify full requirements and prevent assumptions before coding.

Apply the 'Sandwich Model' for Feedback

When providing input to peers, ask permission first and structure remarks constructively: open with positive recognition, provide actionable suggestions, and conclude with encouragement.

Maintain Work Logs & Finish CareerBridge

Complete CareerBridge Course 3 and record daily logs of completed tasks, meeting minutes, and GitHub commits to highlight organizational and time management skills in job interviews.
